Description:

More than 400 projections make it easier to learn anatomy, properly position the patient, set exposures, and take high-quality radiographs! With **Merrill's Atlas of Radiographic Positioning & Procedures, 13th Edition**, you will develop the skills to produce clear radiographic images to help physicians make accurate diagnoses. It separates anatomy and positioning information by bone groups — using full-color illustrations to show anatomical anatomy, and CT scans and MRI images to help you learn cross-section anatomy. Written by radiologic imaging experts Bruce Long, Jeannean Hall Rollins, and Barbara Smith, **Merrill's Atlas** is not just the gold standard in radiographic positioning references, and the most widely used, but also an excellent review in preparing for ARRT and certification exams!

- Comprehensive, full-color coverage of anatomy and positioning makes *Merrill's Atlas* the most in-depth text and reference available for radiography students and practitioners.
 - **Frequently performed projections** are identified with a special icon to help you focus on what you need to know as an entry-level radiographer.
 - **Numerous CT and MRI images** enhance your comprehension of cross-sectional anatomy and help you prepare for the Registry examination.
 - **UNIQUE! Collimation sizes** and other key information are provided for each relevant projection.
 - **Bulleted lists** provide clear instructions on how to correctly position the patient and body part when performing procedures.
 - **Summary tables** provide quick access to projection overviews, guides to anatomy, pathology tables for bone groups and body systems, and exposure technique charts.
 - NEW! Coverage of the latest advances in digital imaging also includes more digital radiographs with greater contrast resolution of pertinent anatomy.
 - **NEW positioning photos** show current digital imaging equipment and technology.
